Matthew Schuppel

BIOMEDICAL ENGINEER

Dallas, TX | 269-568-8014 | matthew@matthewschuppel.com | matthewschuppel.com

Biomedical engineer and clinical application specialist with 4+ years of experience supporting implantable and robotic neurosurgical devices in clinical trials and operating rooms. Experienced in clinical site activation, clinician training, and nationwide technical support. Works independently with minimal supervision, taking ownership of field support and internal projects while collaborating with clinical, R&D, and quality teams.

PROFESSIONAL EXPERIENCE

Clinical Application Specialist
Apr 2024 - Present

Carthera Inc.

- Activated and onboarded 20+ U.S. clinical sites, supporting site relationships from initial training through ongoing procedures and treatments.
- Deliver device demonstrations and training for neurosurgeons, nurses, oncologists, and other clinical staff, with support for implantations and activations during clinical trials.
- Independently coordinate nationwide on-site and remote technical support, prioritizing site needs and troubleshooting device issues with minimal supervision.
- Created training procedures and internal tools to address operational needs, support site onboarding, and coordinate team activities and clinical trial logistics.
- Collaborate with R&D on device development and with quality assurance on complaints and technical follow-up. Maintain training records and technical documentation.

Clinical Support Engineer
Feb 2022 - Apr 2024

Renishaw Healthcare Inc.

- Provided on-site and remote clinical and technical support for stereotactic neurosurgical robotics, including sEEG, deep brain stimulation (DBS), and laser interstitial thermal therapy (LITT) workflows.
- Installed robotic systems and delivered in-service training on operation and care; traveled weekly to support surgical teams and customer sites.
- Coordinated preventive maintenance using metrology calibration practices and performed hardware and software troubleshooting, documenting service activities and corrective actions for quality management.
- Supported sales through robotic system demonstrations, clinical needs assessments, and customer evaluations. Served as a technical resource at neurosurgical conferences.

TECHNICAL AND CLINICAL SKILLS

Clinical: Site activation, medical device training, neurosurgical robotics, implantation and activation support, clinical trials, physician and site relationships

Technical: Hardware and software troubleshooting, preventive maintenance and calibration, technical documentation, R&D and quality collaboration

EDUCATION

B.S. in Biomedical Engineering
2021

University of Oklahoma

Available for up to 100% travel | Open to select relocation opportunities
